★★★★★ **Consciousness, Intent, and the Structure of the Universe**

Reviewer: **A reader** from Aberystwyth, United Kingdom

Jeffrey Keen has a background in the Physical Sciences. He is a member of the British Society of Dowzers and has gained years of experience as a dowser before deciding to publish his book.

The result is a work that many dowzers will find satisfying. For one thing Keen does not duck the issue of the involvement of Consciousness in dowsing. The book is packed with the results of carefully executed experiments with meaningful graphs and diagrams. The book is extremely well indexed, the chapters are kept short and there are summaries at the end of every chapter.

This is just as well because, as the physicist and BSD member Jim Lyons pointed out, this book is not for the faint hearted. Most of the mathematics involved would not tax an intelligent teenager too much; however, some of the new concepts are definitely highbrow and occasionally mind-boggling! You will find some Quantum Theory and general Physics ideas such as mass, wavelength, field strength, field range, Fibonacci series and geometry. That's the sort of book this is.

Tom Graves once commented that the subject of Energy dowsing was in a mess. Perhaps now, with the publication of this book, there is some hope.
